Category:Tamil film score composers Category:Living people Category:People from Sivakasi Category:Film musicians from Tamil Nadu Category:Year of birth missing (living people)Q: Jackson XML map into class I'm using Jackson 2.3 and the default annotations to serialise to JSON and XML. I'm trying to write a simple program to generate a single instance of a class as XML and a collection of those objects as JSON. I've done this in past programs by constructing my own objects and then serialising them with the Jackson library. But I've recently started using Spring to construct my classes and I've stumbled across a problem. Here's my class: public class MyObject { private String a; private int b; private String c; public String getA() { return a; } public void setA(String a) { this.a = a; public int getB() { return b; public void setB(int b) { this.b = b; public String getC() { return c; public void setC(String c) { this.c = c; @Override public String toString() { return "MyObject [a=" + a + ", b=" + b + ", c=" + c + "]; } } And here's my main class: @Configuration public class MyConfig { @Bean public ObjectMapper objectMapper() { ObjectMapper mapper = new ObjectMapper(); mapper.setSerializationInclusion(JsonInclude.Include.NON_NULL); mapper.configure(Serial 82157476af
